

INTERCALL UNIFIED MEETING

Manage your call online and have total control.

Conference calls are an everyday occurrence in the business world. However, well-planned meetings can easily get off track and may not provide the sense of security you really need.

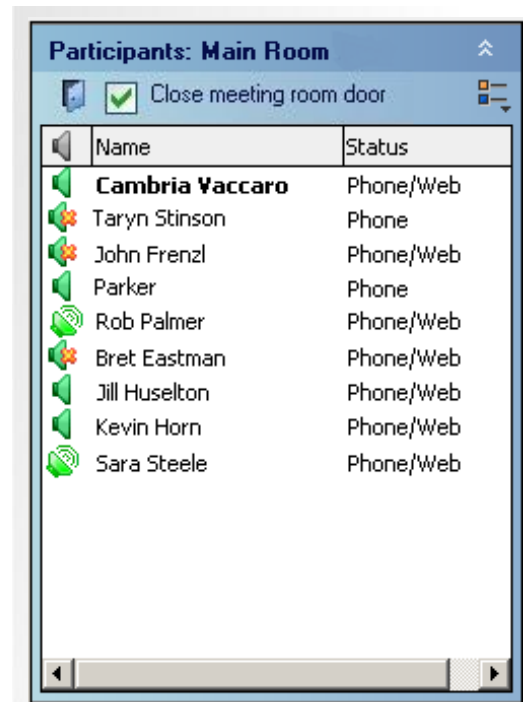

At some point even the most experienced conference hosts start asking themselves if there is an easier way to:

- Take attendance at the start of the call. Manual roll call eats up meeting time
- Identify who just joined. The beep doesn't indicate who's there.
- Get everyone to mute their lines. No one remembers how and background noise interrupts the speaker.
- Secure a meeting. Only invited participants should be allowed to join
- Remind participants it's time to meet. Did they forget?

Keep your calls on track with InterCall Unified Meeting

With a simple to use interface, you can conduct better conference calls without touching a telephone keypad. Control your call with simple clicks to:

- View all participant connections so you know who's joined.
- See who's speaking in real time with "active speaker".
- Sort participants by active speaker, name or connection type to easily find who you are looking for.
- Rename participant connections for current and future meetings.
- Mute/unmute participant lines to control unwanted background noise.
- Reach the right participants in real time by dialing out to them directly.
- Send instant reminders using IM or email directly from the meeting interface.
- Move selected participants in and out of break out rooms for private conversations.

Keep your calls secure

In addition to controlling your call, InterCall Unified Meeting® also provides many options for additional meeting security. Included is the ability to:

- Know who enters or exits your meeting with custom notification settings.
- Dismiss unwanted participants with a simple mouse click
- Lock/unlock meeting room door to restrict access to your meeting.
- Replay pre-recorded participant names to verify who's on the call.
- Automatically identify phone only connections with names of contacts stored in your personal Outlook address book.

Gain control over your conference calls

Try conducting your next call with InterCall Unified Meeting and see how it makes controlling calls easier, keeps them secure and more effective - all with the click of your mouse!
